

The user can filter by using the lookup box in the upper right corner of the tool as displayed below.

Users can use a wildcard which is a star: * before or after typing in text. For example, typing T.CH* would display results for all T.CH iterations such as T.CH, T.CH1 and T.CHA. To filter by more than one component, users can leave a space between each field. For example, T.CH TSLA would display all TSLA activity in the account T.CH. Users can use a NOT operator by typing ^. For example, ^.T.CB would display all accounts except T.CB. Note, the NOT filter works in combination with the wildcard filter.

Another way to filter is to right click on any values in the grid, select 'Filter on' and select Account, RiskGroupID, RiskHash, Ticker or Username.

- Creating up to 6 different views

Views can be created via the column selector described below. The views can be recalled by clicking on the number selector or using the hotkeys Ctrl + 1 to 6. Users have up to 6 custom views. After selecting the metrics, users can rearrange columns which will be saved automatically under the current view.

- Column selector

The window below is obtained by right clicking on the column header and selecting the column chooser. The available columns list is displayed to the left. The visible columns list is displayed to the right. Users can highlight from the available column list and drag to the visible column list to create a view. Views are selected by clicking on one of the numbers in the red box.

Visible columns can be rearranged using the 4 arrows above the list. The first up arrow moves the current selected row above by one. The next up arrow with a bar moves the current selected row to the top of the list. The down arrow moves the current selected row down by one. The last down arrow with the bar moves the current selected row to the bottom of the list.

Users have access to a search dialog box to find specific metrics. The window provides a comprehensive description for each metric. The search engine allows users to search across the Caption, Group and Description fields. Toward the bottom of the window, users can customize the display of the grid by selecting a density, color scheme and format.

- Account selector

The window below is obtained by clicking on the silhouette icon. By default, users see all assigned accounts when opening the tool. However, users can select/deselect accounts by checking/unchecking the square boxes to the left of the account list. Users can also filter by typing an account in the filter box above the list. Lastly users can select/deselect all accounts using the buttons at the bottom of the list.

Choose Accounts

SELECT NONE

- Cancel Orders

Users can click on the cancel widget (red arrow in the screenshot below) to cancel orders across select accounts. When the widget is clicked, a pop-up window will appear, displaying all accounts the user has access to. Users have the option to mass cancel active orders across all accounts by clicking on the red button 'Cancel Orders For All Accounts'. Alternatively, they can cancel all orders in an individual account by clicking on the red X button to the right of the desired account.

Mass Cancel All Orders

✖

This button will immediately cancel all orders for a single account.

- The Orders tab contains outright orders across all asset classes.
- The Orders tab offers aggregation functionality allowing three aggregation buckets to view orders.
- There is a split view once you click on each aggregation line showing further order details.
- When the 'active only' button is checked (see green rectangle above), any closed orders are removed from the list.
- There is a tool alert function in the form of a red bubble notification across all tabs. We are currently developing a customizable sound alert to complement this alert function.

- Users can be alerted of legged orders via an alert bubble on the MultiLeg Orders tab. The row will also be highlighted in the grid to allow users to quickly identify any working legged orders.
- Orders that have been closed and were legged will not be highlighted.
- The spread definition field provides better descriptive information.
- Like the Orders tab, this tab has several combined columns to give it a cleaner look.

Auto Hedge States

- The Autohedge States tab is where users can see the status of all components of an autohedged order.
- This tab will show users the amount of \$delta that has traded for an autohedge group, as well as the amount of \$delta that was hedged against it.
- Users can be alerted of a legged autohedge via an alert bubble at the top of the screen on the Auto Hedge States tab. The row will also be highlighted in the grid.
